Credit Name: CSE2130
Assignment Name: Count Vowels

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem
How did you approach understanding the challenge?
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?
I found this assignment to be pretty straight forward, the only part that kind of threw me off was when I ran into issues with my loops not ending when I'd like but that was a pretty simple fix.

Planning the Solution
Did you create a plan or break the problem into smaller steps before coding? How did you decide on the tools, data structures, or algorithms to use?
I didn't feel the need to plan it out in a specific set of steps because the program was pretty straight forward.

Implementation
Did you write the code in small pieces or attempt the entire solution at once? How did you test your solution along the way to make sure it was working?
The linear structure of the assignment made me naturally do how the file is read before moving onto how the vowels are accounted for.

Overcoming Challenges
What part of the problem was the most difficult for you? How did you handle moments when you felt stuck or unsure of what to do next?
The hardest part for me was making sure the program was running through each line correctly. It wasn't very complex and once I got the syntax worked out it ran smoothly

Learning
Was there anything you learned that you think will help you with future challenges?
It wasn't entirely new to me, but I had mostly forgotten about *.contains()* and I think that after using it in this program that it will come in handy during later assignments.
