Credit Name: CSE2130
Assignment Name: Student Semester Average

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem
How did you approach understanding the challenge?
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?
It was mostly straightforward, but I did get a little confused when first using the file reading with the button.

Planning the Solution
Did you create a plan or break the problem into smaller steps before coding? How did you decide on the tools, data structures, or algorithms to use?
I divided into the GUI design, writing to the file, and reading to the file/viewing it

Implementation
Did you write the code in small pieces or attempt the entire solution at once? How did you test your solution along the way to make sure it was working?
I started by designing the GUI before moving onto how the button would allow take the data from each text field, and then viewing the data in the file.

Overcoming Challenges
What part of the problem was the most difficult for you? How did you handle moments when you felt stuck or unsure of what to do next?
It took me a while to integrate the J Button with the file reader, but through a little bit of trial and error I managed to sort it out.

Learning
Was there anything you learned that you think will help you with future challenges?
This assignment required the file to be read multiple times and written to it while also intermittently which I can see myself needing to use again in future projects.
