

Credit Name: CSE3010

Assignment Name: LocalBank

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

- I focused on building the program from the bottom up, making sure to start and mostly finish each base component before moving on to the next part of the program.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding? How did you decide on the tools, data structures, or algorithms to use?

- I broke it into stages, seeing what variables would be called on and doing those first.

Implementation

Did you write the code in small pieces or attempt the entire solution at once? How did you test your solution along the way to make sure it was working?

- I broke it into stages, seeing what variables would be called on and doing those first.

Overcoming Challenges

What part of the problem was the most difficult for you? How did you handle moments when you felt stuck or unsure of what to do next?

- I had to reteach myself how separate files interacted with each other, but after looking at older code I was able to remember.

Learning

Was there anything you learned that you think will help you with future challenges?

- Just remembering how separate files interact with each other.
