

Credit Name: CSE3010

Assignment Name: StudentSchoolAndGrade

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem

How did you approach understanding the challenge?

Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?

- It was pretty straightforward, and I just needed to implement the skills I learned into a single program.

Planning the Solution

Did you create a plan or break the problem into smaller steps before coding? How did you decide on the tools, data structures, or algorithms to use?

- I didn't plan it out much in advance, it was simple enough that it just all came together regardless of the order I did it in.

Implementation

Did you write the code in small pieces or attempt the entire solution at once? How did you test your solution along the way to make sure it was working?

- I wrote it all at once and tested it after doing each type of process before copying the code over to other parts of the same program and switching out the variables.

Overcoming Challenges

What part of the problem was the most difficult for you? How did you handle moments when you felt stuck or unsure of what to do next?

- Hardest part was finding the right images to fit the window

Learning

Was there anything you learned that you think will help you with future challenges?

- I didn't learn anything new, it was mostly just tying things together.
